What is ROR?

- ROR, the Research Organization Registry, is a global, community-led registry of open persistent identifiers for research organizations.
- ROR is an established, trusted, widely adopted, no-cost service that is becoming a standard in scholarly communication and scholarly publishing.
- ROR makes information about research organizations clean, consistent, normalized, and easy to exchange among software systems so that research outputs can be reliably associated with research organizations.
- ROR is a community infrastructure initiative jointly operated by Crossref, DataCite, and the California Digital Library.

RORとは何か?

- ROR(Research Organization Registry)は、研究機関のためのオープンで永続的な識別子を提供する、グローバルかつコミュニティ主導のレジストリ
- RORは、確立され、信頼され、広く採用されている無償のサービスであり、学術コミュニケーションおよび学術出版における標準として定着しつつある
- RORは、研究機関に関する情報を、整理され、一貫性があり、標準化された形で提供し、ソフトウェアシステム間で簡単に交換できるようにすることで、研究成果を確実に研究機関と結びつけることができる
- RORは、Crossref、DataCite、California Digital Libraryが共同で運営する、コミュニティ主導のインフラの取り組み

The screenshot shows the Dryad Dataset submission interface. On the left, there is a checklist with several items checked, including "Title" and "Authors". The main area is titled "Dataset submission" and shows the "Authors" section. It displays a form for adding an author with fields for First name (Amanda), Last name (French), Institutional affiliation (Find as you type...), Email address (afrench@crossref.org), and a "Publish email" checkbox. There are also buttons for "+ Add affiliation", "+ Add group author", and "+ Add author". At the bottom, a note states: "All authors must include their name and at least one affiliation." Below this, there is information about the submitter being the point of contact and needing to approve the submission.

RORは研究システム向けに設計されている

The screenshot shows the Dryad Dataset submission interface. On the left, there is a sidebar titled "Checklist" with several items checked off:

- Title
- Authors
- Description
- Subjects
- Support
- Compliance
- Files
- README
- Related works
- Agreements

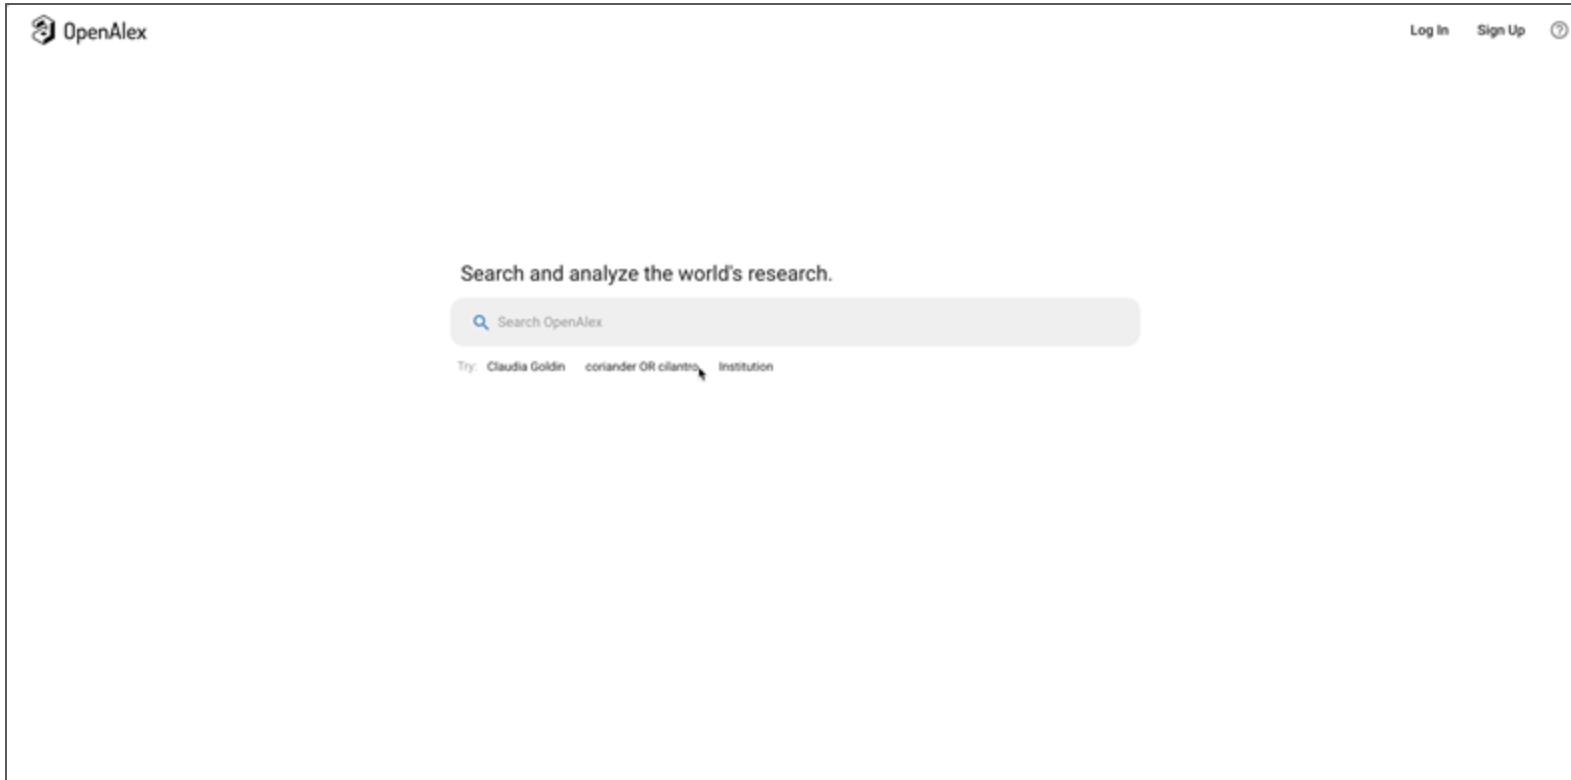

The main area is titled "Dataset submission" and shows the "Authors" section. It displays a form for adding an author:

First name: Amanda
Last name: French
(radio buttons: Given name, Family name)
Institutional affiliation: Find as you type...
(radio buttons: Employer or sponsor)
Email address: afrench@crossref.org
(checkbox: Publish email)
(radio button: name@institution.org)
Creator (with a person icon)

Buttons at the bottom include "+ Add group author" and "+ Add author".

A note at the bottom left says: "All authors must include their name and at least one affiliation." Below it, a note says: "Authors may be invited to edit this submission. One author must be the submitter. The submitter will be the point of contact for Dryad, and must approve this submission for curation and publication." Another note at the bottom says: "An email address is required for the submitter and any other authors invited to edit the submission."

Open metadata enables tracking of Open Science

The screenshot shows the homepage of the OpenAlex website. At the top left is the OpenAlex logo, which consists of a stylized 'A' icon followed by the word 'OpenAlex'. At the top right are links for 'Log In', 'Sign Up', and a help icon. Below the header is a large search bar with the placeholder text 'Search and analyze the world's research.' and a magnifying glass icon. Underneath the search bar is a smaller input field containing the text 'Try: Claudia Goldin coriander OR cilantro Institution'. The main body of the page is currently empty, showing a light gray background.

RESEARCH ARTICLE

A half-century of global collaboration in science and the “Shrinking World”

Keisuke Okamura^{1,2}

¹The University of Tokyo
²National Graduate Institute for Policy Studies (GRIPS)

Keywords: cluster analysis, international research collaboration, open bibliometrics, Shrinking World, US-China relationship

ABSTRACT

Recent decades have witnessed a dramatic shift in the cross-border collaboration mode of researchers, with countries increasingly cooperating and competing with one another. It is crucial for leaders in academia and policy to understand the full extent of international research collaboration, their country's position within it, and its evolution over time. However, evidence for such world-scale dynamism is still scarce. This paper provides unique evidence of how international collaboration clusters have formed and evolved over the past 50 years across various scientific publications, using data from OpenAlex, a large-scale open bibliometrics platform launched in 2022. I first examine how the global presence of top-tier countries has changed in 15 natural science disciplines over time, as measured by publication volumes and international collaboration rates. Notably, I observe that the United States and China have been rapidly moving closer together for decades but began moving apart after 2019. I then perform a hierarchical clustering to analyze and visualize the international collaboration clusters for each discipline and period. Finally, I provide quantitative evidence of a “Shrinking World” of research collaboration at a global scale over the past half-century. My results provide valuable insights into the big picture of past, present, and future international collaboration.
