CHORUS is an innovative non-profit organization that supports funders, publishers, authors, and institutions to deliver public access to articles reporting on funded research

CHORUS BENEFITS ALL STAKEHOLDERS:

- Enables **free access** to articles reporting on funded research
- Leverages existing infrastructure for **cost-effective public-access solution**
- Works with **no extra cost** to funders or authors, preserving funds for research
- Provides **optimized search** and enables **innovation** via open tools and CHORUS application available to common search engines and developers
- Directs public to **research in context** with publisher-provided tools and any updates to articles

CHORUS PROVIDES:

- Streamlined **ACCESS** to the **best available version** of published articles reporting on funded research — immediately or after an embargo period — on official journal sites, in context with essential information and additional tools.
- Optimized **DISCOVERY** to make it easy to find research articles. CHORUS’ open infrastructure enables everyone to use common search engines to find what they are looking for and invites innovators to develop new tools and functionality to further support public access.
- Efficient funder **IDENTIFICATION** to indicate which articles report on taxpayer-funded research, simplifies researcher compliance (minimizing the time spent on administrative tasks), and creates metadata that trigger public access.
- Public access audits and dashboard reports to facilitate **COMPLIANCE** monitoring by funders, publishers, and academic institutions, without adding unnecessary costs and administrative overhead.
- Special **PRESERVATION** arrangements with trusted archives such as Portico and CLOCKSS to ensure the integrity and sustainability of the scholarly record and establish permanent, perpetual public access to content.

As of May 2017, CHORUS monitors more than 340,000 articles for public access and long-term availability, of which more than 76,000 are already freely accessible to the public. We estimate that this represents around 70% of articles subject to public access mandates. Statistics are continually updated at [www.chorusaccess.org](http://www.chorusaccess.org).

CHORUS monitors access to articles funded by 25 funding agencies, and – as of April 2017 – has agreements with 7 US and 2 international funders to work together to enable public access.
